April 2017 Highlights

LASSO HIGHLIGHTS: April 2017

Performance

- LASSO was flat in April. In comparison, its benchmark, the HFRX Equity Hedge Index, had a return of 0.7%, while its peer group, the Morningstar Multialternative Category, was up 0.4%. As background, the S&P 500 had a gain of 1.0%, while the Bloomberg Barclays US Aggregate Bond Index rose 0.8%.
- Since LASSO's inception on 12/31/98, it has had a cumulative gain of 121.7% versus 174.5% for the S&P 500 Index. However, LASSO has had only 32% of the daily volatility of the S&P 500, while capturing 70% of the Index's upside. We believe that the program's diversified and well-hedged posture has been effective over time in generating solid growth while dampening volatility.

LASSO[®] Composite Net Performance Highlights*									
	April 2017	QTD 2017	YTD 2017	3-Year	Annualized Returns			Since Inception: 12/31/98	
					5-Year	10-Year	Inception	Cumulative	Volatility**

Market Overview

- The S&P 500 was flat or underwater for much of April. It was only in the last seven trading days that sentiment turned more positive and the Index notched its gain for the month. The primary catalysts for the renewed upswing included progress in the House on hammering out a budget bill and the results of the first round of voting in the French presidential election. Additionally, investors reacted positively to Trump's tax proposal (despite its brevity and lack of detail), the ECB's signal that it would maintain quantitative easing for the foreseeable future, and the strength of corporate earnings in the US.

***Past performance is no guarantee of future results.**

See Explanatory Notes and Disclosures on pages 15 and 16.

Actual results of individual accounts will vary due to client cash flows, timing of implementation, different custodians, the availability of underlying funds, applicable regulation, and other factors. Small accounts may perform below the composite due to the greater impact of transaction costs.

****Annualized standard deviation of daily returns**

LAASSO PORTFOLIO REVIEW: April 2017

Market Overview (continued)

- Although the S&P 500 was up 1.0% for the month, there were meaningful divergences within equity markets overall:
 - Most notably, growth stocks significantly outperformed value, the fourth month in a row that this pattern has occurred. This was especially apparent for large-cap stocks, as the Russell 1000 Growth Index gained 2.3%, while the Russell 1000 Value Index was down -0.2%. Similarly, among small-caps the Russell 2000 Growth Index rose 1.8%, while the Russell 2000 Value Index edged up only 0.4%.
 - Much of the performance spread between growth and value was attributable to wide divergences in sector performance. Most significantly, tech and consumer discretionary were up 2.5% and 2.4%, respectively, for the month, while telecoms and energy were down -3.3% and -2.9%, respectively. Telecoms were negative due to worries about earnings for Verizon and AT&T, while energy was undermined by concerns about oversupply and weak oil prices.
- Among international equity markets, the major developed regions largely followed the pattern of the S&P 500 by booking all of their gains in the last week of the month:
 - The MSCI Europe Index continued its upward momentum, gaining 1.5% in local currency terms and 3.5% in US dollars, which weakened versus the euro. European equities rallied after the results of the first round of voting in France on optimism that the centrist candidate, Macron, would ultimately prevail, implying that the risk of “Frexit” had been reduced.
 - The MSCI Japan Index gained 1.1% both in yen terms and in US dollar terms. There were few significant domestic macro developments.
 - Emerging markets were mixed. While MSCI China and MSCI India gained 2.6% and 1.9%, respectively, MSCI Brazil and MSCI Russia slipped -0.1% and -0.2%. (Note: all figures for emerging markets in US dollar terms).
- In US fixed income markets, 10-year Treasury yields moved lower, and high yield and corporate credit tended to follow the rise in equity markets. In Europe and in Japan, benchmark rates and yields tended to move sideways in a very narrow range.

LAASSO PORTFOLIO REVIEW: April 2017

Strategy Leaders & Laggards

- *Leaders:* discretionary global macro, merger arbitrage, equity put writing, hedged equity/multi-asset
- *Positive:* long-biased equity, strategic fixed income
- *Muted:* global hedged equity, convertible arbitrage
- *Mixed:* hedged equity, systematic managed futures

Portfolio Highlights

- The majority of strategies in the program were positive in April; however, their gains were offset by negative results in hedged equity and systematic managed futures.
- Among the equity-oriented allocations, the performance leaders were our equity put writing manager, one of our long-biased equity managers, and our hedged equity/multi-asset manager. Each modestly outperformed the S&P 500 Index. Our other long-biased equity manager, our highly hedged equity manager, and our global hedged equity manager were also positive but had more modest results. In contrast, our core hedged equity manager was down meaningfully, due to a focus on energy and financials on the long side of the portfolio.
- In the arbitrage-related area, our merger arbitrage managers posted strong gains, outperforming the S&P 500 Index, largely due to significant spread tightening on the Alere/Abbott deal. In contrast, our convertible arbitrage/covered call manager posted a small gain.
- Both strategic fixed income managers were positive but trailed the Bloomberg Barclays US Aggregate Bond Index, due to their relatively defensive positioning.
- Our discretionary macro manager had a strong gain for the month, driven largely by exposure to corporate credit, emerging market debt, and currencies.
- In the systematic managed futures area, our core allocations to a diversified, multi-manager fund and a single-manager fund that uses a quantitative, model-based trend following approach struggled throughout April, due to currency and bond exposures. In contrast, our counter-trend equity futures trader was flat.

LASSO PORTFOLIO REVIEW: April 2017

Macro Perspective

- Looking forward, we continue to expect the investment landscape to be characterized by:
 - a significant degree of dispersion among major equity and fixed income markets around the world (magnified by currency moves);
 - a significant degree of dispersion within equity and credit markets; and
 - heightened volatility across markets, which is being magnified by the political and policy uncertainties associated with the Trump administration in the US as well as “Brexit.”
- Our view is that the global investment environment is undergoing a significant transition:
 - In the US, the Federal Reserve has embarked on an effort to normalize interest rates. While monetary policy may remain cautious, excess liquidity will be less of a factor in driving markets, while fundamentals will be increasingly important. However, the policy directions of Donald Trump raise a number of uncertainties. On the one hand, equity markets have been excited by the prospect of fiscal stimulus, tax reform, and deregulation. On the other hand, there are risks associated with reflation, rising interest rates, and potential trade wars. Consequently, volatility and sector rotation will increase, as investors try to sort out the “winners” and “losers” from policy changes.
 - In Europe, there is a disconnect: the ECB’s promise to “do whatever it takes” to nurse along a fragile recovery cannot fully gain traction without structural changes that are impeded by the continent’s political patchwork (which now has been exacerbated by Brexit).
 - In Japan, there is a conundrum: growth continues to be anemic despite ever greater quantitative and qualitative easing.
 - In China, there is a dual contradiction: 1) policy makers are struggling to manage the currency while trying to contain capital outflows, and 2) efforts to stimulate the economy conflict with the need to reduce excessive leverage throughout the financial system.
- Although markets have been eerily calm, as indicated by the low levels of the VIX, we believe that this is unsustainable. We expect the crosscurrents stemming from the macro divergences and dissonances to engender turbulence across markets.

Outlook

- Given this backdrop, we are continuing to allocate the LASSO program across a diversified mix of strategies, and composite net equity exposure remains just under the middle of our target range.
- We believe that the LASSO strategy is well positioned to live up to its history of producing attractive risk-adjusted returns over time.

LASSO CUMULATIVE DAILY RETURNS

LASSO Composite (net) vs. S&P 500

Inception of LASSO from December 31, 1998 through April 30, 2017

LASSO HISTORY

A long record of...

**enhanced returns, lower risk, and reduced correlation...
via a liquid, “user friendly,” alternative investment.**

Performance

- Over eighteen year track record: 12/31/98 to 4/30/17
- Cumulative return since inception: 121.7% (net) versus 174.5% (S&P 500)
- Reduced volatility: gains achieved with less than 1/3 of the daily volatility of the S&P 500

Benefits: Structure

- Daily liquidity
- “User friendly” access to alternative strategies
- Diversification through an array of alternative strategies and instruments
- “One stop” package of alternatives to enhance the asset allocation process

Benefits: Risk/Return Profile

- Relatively stable returns (vs. equities)
- Potential downside protection and reduced volatility
- Reduced correlation to stocks and/or bonds
- Serve as an alternative or complement to conventional equity and fixed income

*See Explanatory Notes and Disclosures.
Past performance is no guarantee of future results.
There can be no assurance that any objectives can be achieved.*

LASSO STRUCTURE

**A multi-manager investment program...
of carefully selected alternative mutual funds...
that invest long and short, or use hedging or alternative strategies.**

Structure

- Multi-manager mutual fund program
- Managed portfolio of carefully selected mutual funds that invest long and short, or use hedging or alternative strategies
- Available through separate accounts or commingled pools

Additional Benefits

- Lower cost structure vs. hedge funds and funds-of-funds
- Regulated instruments
- No K-1s
- Provide access to unique mutual funds, some of which may be closed
- *For additional information, contact:

LASSO EXPLANATORY NOTES AND DISCLOSURES

The preceding performance is a composite of all discretionary, fee-paying accounts managed by Lake Partners, Inc. (“LPI”) utilizing the LASSO Long and Short Strategic Opportunities strategy (“LASSO”). Performance is weighted by account size and time-weighted for each performance period, and reflects the reinvestment of dividends and other earnings. Performance is net of all fees and expenses, including: LPI portfolio management fees, fees and expenses of underlying funds, and brokerage, administrative, and custodial costs. (The composite includes separate accounts as well as all commingled vehicles utilizing the LASSO strategy).

Performance was affected by material market and economic conditions that were independent of and not controlled by LPI or the managers of the underlying funds and may be different in the future. Actual results and holdings of individual accounts will vary due to client cash flows, timing of implementation, different custodians, the availability of underlying funds, applicable regulation, and other factors. Small accounts may perform below the composite due to the greater impact of transaction costs.

**All securities investing involves the risk of loss.
Past performance is no guarantee of future results.**

There can be no assurance that the LASSO Long and Short Strategic Opportunities program can meet its stated objectives.

LASSO differs substantially from the market indices, which are included for comparison purposes only.

The S&P 500 is an unmanaged, capitalization-weighted index of the common stocks of 500 widely held US companies. It does not include fees or expenses. Direct investment in an index is not possible. (S&P 500 is a registered trademark of Standard & Poor’s Financial Services LLC, a subsidiary of The McGraw-Hill Companies, Inc.) LASSO differs substantially from the S&P 500, which is used for comparison purposes as a widely recognized measure of US stock market performance. While the returns of LASSO have exhibited positive (but varying) correlation to the index over time, the underlying funds in the program may invest in different stocks and in different proportions than in the index.

The Bloomberg Barclays US Aggregate Bond Index is an unmanaged index of fixed rate debt securities rated investment grade or higher by Moody’s, Standard & Poor’s, or Fitch rating services. All issues have at least one year to maturity and an outstanding par value of at least \$25 million to \$1 billion based on the type of security. The index does not include fees or expenses. Direct investment in an index is not possible. (Bloomberg is a trademark of Bloomberg Finance L.P. Barclays is a trademark of Barclays Capital PLC.) LASSO differs substantially from this index, which is used for comparison purposes as a widely recognized measure of U.S. bond market performance. Although the mutual fund allocations in the LASSO portfolio emphasize stocks and hedged equities, and bonds to a lesser degree, the historical volatility of LASSO (as measured by standard deviation, a measure of the variation of returns) is more comparable to the bond market index rather than the stock market index. LASSO may use underlying funds that invest in non-investment grade bonds, which may entail additional credit risk. LASSO may use underlying funds that invest in non-US and emerging market bonds, which may entail additional credit, sovereign, and currency risks.

LAGO EXPLANATORY NOTES AND DISCLOSURES

The HFRX Equity Hedge Index ("HFRXEH") is part of the HFRX series of hedge fund indices, published by Hedge Fund Research, Inc., which are designed to reflect the daily performance of a variety of hedge fund strategies. The indices include funds that meet the screening criteria of Hedge Fund Research, Inc., including a 24-month track record and \$50 million under management, and are open to new investments. The HFRXEH is designed to be both investable and to reflect the overall structure and composition of the equity long/short hedge fund universe. • LASSO differs substantially from the HFRXEH, which is used for comparison purposes as a daily-valued measure of hedge fund performance. LASSO is comprised of "alternative mutual funds," a limited universe of mutual funds that use short-selling, hedging, and other hedge-fund-like strategies. In contrast, the HFRXEH uses a sampling from the broad equity long/short hedge fund universe, which contains more funds and strategies than available through alternative mutual funds. In addition, hedge funds in the index may also use a greater degree of leverage and illiquid securities than permitted for mutual funds due to regulatory restrictions. Nevertheless, the performance of LASSO and the HFRXEH have exhibited positive (but varying) correlation over time, reflecting the prevalence of long-short equity strategies in the universe of alternative mutual funds. • The index is net of fees and expenses of the underlying managers, including incentive fees, a type of fee generally not charged by the mutual funds in LASSO due to regulatory restrictions. The index does not reflect a fund-of-funds management fee, which is reflected in LASSO performance. Direct investment in the index is not possible. Commingled vehicles based on the index are available to investors, subject to additional fees and expenses.

The Morningstar Multialternative Category (monthly data series) includes mutual funds (identified by Morningstar, Inc.) that offer investors exposure to several different alternative investment strategies. Funds in this category allocate a majority of their assets to alternative strategies and include both funds with static allocations to alternative strategies and funds tactically allocating among alternative strategies and asset classes. Gross short exposure is generally greater than -20%. • The performance of the Morningstar Multialternative Category is represented by the Morningstar Multialternative Category Average ("MMCA"). The MMCA is among the various averages published by Morningstar, Inc. to measure the performance of a group of funds that utilize a similar investment strategy. The MMCA is based on Morningstar's Enhanced Category Averages methodology, which reflects the average monthly returns for the Morningstar Multialternative Category, based on equally weighting each share class of each fund that existed in the category for the entirety of each historical month, with annual and trailing return calculated by geometrically linking these monthly numbers. The MMCA is net of fees and expenses of the underlying funds. • LASSO differs substantially from the MMCA, which is used for comparison purposes as a measure of alternative mutual fund performance. The LASSO portfolio may include mutual funds included or not included in the Morningstar Multialternative Category. The Morningstar Multialternative Category does not reflect a fund-of-funds management fee, which is reflected in LASSO performance. Direct investment in the MMCA is not possible.

Although the returns of LASSO have exhibited reduced or low correlations to the returns of the above indices, the indices utilized herein are widely recognized indices for the performance and risk characteristics of stocks, bonds, and alternative strategies, as well as for asset allocation and comparison purposes.
