June 2017 Highlights

LASSO HIGHLIGHTS: June 2017

Performance

- LASSO gained 0.6% in June, against a background in which the S&P 500 had a gain of 0.6% and the Bloomberg Barclays US Aggregate Bond Index declined -0.1%. In comparison, Lasso's benchmark, the HFRX Equity Hedge Index, had a return of 0.9%, while its peer group, the Morningstar Multialternative Category, was down -0.2%.
- Since LASSO's inception on 12/31/98, it has had a cumulative gain of 122.9% versus 180.1% for the S&P 500 Index. However, LASSO has had only 31% of the daily volatility of the S&P 500, while capturing 68% of the Index's upside. We believe that the program's diversified and well-hedged posture has been effective over time in generating solid growth while dampening volatility.

LASSO® Composite Net Performance Highlights*									
	June 2017	QTD 2017	YTD 2017	3-Year	Annualized Returns			Since Inception: 12/31/98	
					5-Year	10-Year	Inception	Cumulative	Volatility**
LASSO® Composite (net)	0.6%	0.5%	1.2%	-0.6%	2.9%	2.3%	4.4%	122.9%	6.1%

Market Overview

- US equities were beset by a number of crosscurrents during the month. Overall market sentiment continued to be dogged by uncertainties about 1) whether the Republican-controlled Congress would be able to advance meaningful tax and infrastructure legislation, and 2) the pace at which the Federal Reserve would normalize interest rates and reduce its balance sheet. (Continued next page.)

***Past performance is no guarantee of future results.**

See Explanatory Notes and Disclosures on pages 15 and 16.

Actual results of individual accounts will vary due to client cash flows, timing of implementation, different custodians, the availability of underlying funds, applicable regulation, and other factors. Small accounts may perform below the composite due to the greater impact of transaction costs.

****Annualized standard deviation of daily returns**

LASSO PORTFOLIO REVIEW: June 2017

Market Overview (continued)

- Although overall market volatility remained quite modest, as measured by the VIX, sector rotation continued to be very pronounced. In particular, large-cap growth stocks (epitomized by the so-called “FANG” or “FAAMG” stocks*) sold off as investors questioned their lofty valuations. The tech sector, which led the market in May with a gain of 4.4%, was one of the worst performing groups in June with a loss of -2.7%. In contrast, the financials sector was the performance leader in June with a remarkable gain of 6.4%, after having been one of the market laggards in May with a loss of -1.2%. The catalyst for this turnaround was the positive result of the Fed’s stress test, which showed that the country’s largest banks were well capitalized, providing a clear “green light” for higher dividends, more share buy backs, and increased lending.
- These performance reversals in tech and financials were reflected in the divergence between large-cap value and growth indices in June: the Russell 1000 Value Index rose 1.6%, while the Russell 1000 Growth Index was off -0.3%. The real “action” though was in small-caps: the Russell 2000 Growth Index and the Russell 2000 Value Index jumped 3.5% and 3.4%, respectively.
- Among international equity markets, European stock markets stalled during much of June and then suffered downdrafts at month-end when ECB President Draghi hinted that the central bank’s policy of monetary easing might be coming to an end due to the continued improvement in the region’s economy. As a result, the MSCI Europe Index was down -2.3% in local currency terms and -1.1% in US dollars, as the euro strengthened in expectations of relatively higher interest rates versus the US.
- In contrast, Japanese and emerging market equities continued to rally. The MSCI Japan Index rose 2.7% in yen terms and 1.1% in US dollar terms. The MSCI Emerging Markets Index gained 1.0%, driven largely by MSCI China, which was up 2.3%. In contrast, MSCI Russia dropped -3.8% as oil prices remained under pressure. (Note: all figures for emerging markets in US dollar terms).
- In US fixed income markets, the yield curve shifted upwards as 10-year Treasury yields and short-term interest rates edged higher. In Europe, benchmark rates and yields tended to move up, while in Japan yields were relatively stable.

*FANG = Facebook, Amazon, Netflix, and Alphabet (Google).

FAAMG = Facebook, Amazon, Apple, Microsoft and Alphabet (Google)

LASSO PORTFOLIO REVIEW: June 2017

Strategy Leaders & Laggards

- *Leaders:* discretionary global macro, hedged equity, long-biased equity
- *Positive:* merger arbitrage, equity put writing, convertible arbitrage, strategic fixed income
- *Muted:* hedged equity/multi-asset
- *Mixed:* global hedged equity
- *Negative:* systematic managed futures

Portfolio Highlights

- Nearly all of the strategies in the program were positive in June; however, their gains were partially offset by negative results in managed futures.
- Among the equity-oriented allocations, the performance leaders were our hedged equity and long-biased equity managers, which as a group significantly outperformed the S&P 500 Index. Our equity put writing manager also gained. In contrast, our hedged equity/multi-asset manager was up only slightly, while our global hedged equity managers had mixed results.
- In the arbitrage-related area, our merger arbitrage managers were up solidly, while our convertible arbitrage/covered call manager had a more modest gain.
- Both strategic fixed income managers were positive, outperforming the Bloomberg Barclays US Aggregate Bond Index, due to their significant allocations to non-agency mortgage-backed securities and limited durations.
- Our discretionary macro manager had a very strong gain for the month, driven largely by exposure to foreign currencies, emerging market debt, and longer-dated US Treasuries. Portfolio hedges also contributed to performance, including shorts against German and Japanese government bonds.
- In the systematic managed futures area, our core allocations to a diversified, multi-manager fund and a single-manager fund that uses a quantitative model-based trend following approach posted losses after struggling at the end of the month with trend reversals across equities, bonds, and commodities. In contrast, our counter-trend equity futures trader was up slightly.

Macro Perspective

- Looking forward, we continue to expect the investment landscape to be characterized by:
 - a significant degree of dispersion among major equity and fixed income markets around the world (magnified by currency moves);

Past performance is no guarantee of future results. See Explanatory Notes and Disclosures.

LASSO PORTFOLIO REVIEW: June 2017

Macro Perspective (continued)

- a significant degree of dispersion and rotation within equity and credit markets; and
- heightened volatility across markets, which is being magnified by the political and policy uncertainties associated with the Trump administration in the US, as well as “Brexit” and ECB policy in Europe. The markets have largely ignored potential geopolitical flashpoints, but these could flare up at any time.
- Our view is that the global investment environment is undergoing a significant transition:
 - In the US, the Federal Reserve has embarked on an effort to normalize interest rates. While monetary policy may remain cautious, excess liquidity will be less of a factor in driving markets, while fundamentals will be increasingly important. On the one hand, equity markets have been excited by the prospect of fiscal stimulus, tax reform, and deregulation with Trump as president. However, there has been little evidence of significant legislative traction in these areas, without which investor sentiment is likely to turn sour. Furthermore, the markets face risks associated with reflation, rising interest rates, the pending reduction of the Fed balance sheet, and potential trade wars. Consequently, volatility and sector rotation will increase, as investors try to sort out the “winners” and “losers” from policy changes.
 - In Europe, there is a disconnect: investors have grown increasingly enthusiastic about the improving economy, but they have largely discounted the implication that this will lead to less monetary stimulus, as well as a stronger euro (which would dampen exports). Furthermore, needed structural changes are impeded by the continent’s political patchwork, while the consequences of “Brexit” negotiations remain a wild card.
 - In Japan, there is a conundrum: growth continues to be anemic despite ever greater quantitative and qualitative easing.
 - In China, there is a dual contradiction: 1) policy makers are struggling to manage the currency while trying to contain capital outflows, and 2) efforts to stimulate the economy conflict with the need to reduce excessive leverage throughout the financial system.
- Although markets have been eerily calm, as indicated by the low levels of the VIX, we believe that this is unsustainable. We expect the crosscurrents stemming from the macro divergences and dissonances to engender turbulence across markets.

Outlook

- Given this backdrop, we are continuing to allocate the LASSO program across a diversified mix of strategies, and composite net equity exposure remains just under the middle of our target range.
- We believe that the LASSO strategy is well positioned to live up to its history of producing attractive risk-adjusted returns over time.

LASSO CUMULATIVE DAILY RETURNS

LASSO Composite (net) vs. S&P 500

Inception of LASSO from December 31, 1998 through June 30, 2017

See Explanatory Notes and Disclosures • Past performance is no guarantee of future results

LASSO RISK/RETURN PROFILE

Annualized Risk/Return Profile: LASSO Composite (net) vs. Stock and Bond Indices

Inception of LASSO from December 31, 1998 through June 30, 2017 (based on monthly data)

See Explanatory Notes and Disclosures • Past performance is no guarantee of future results

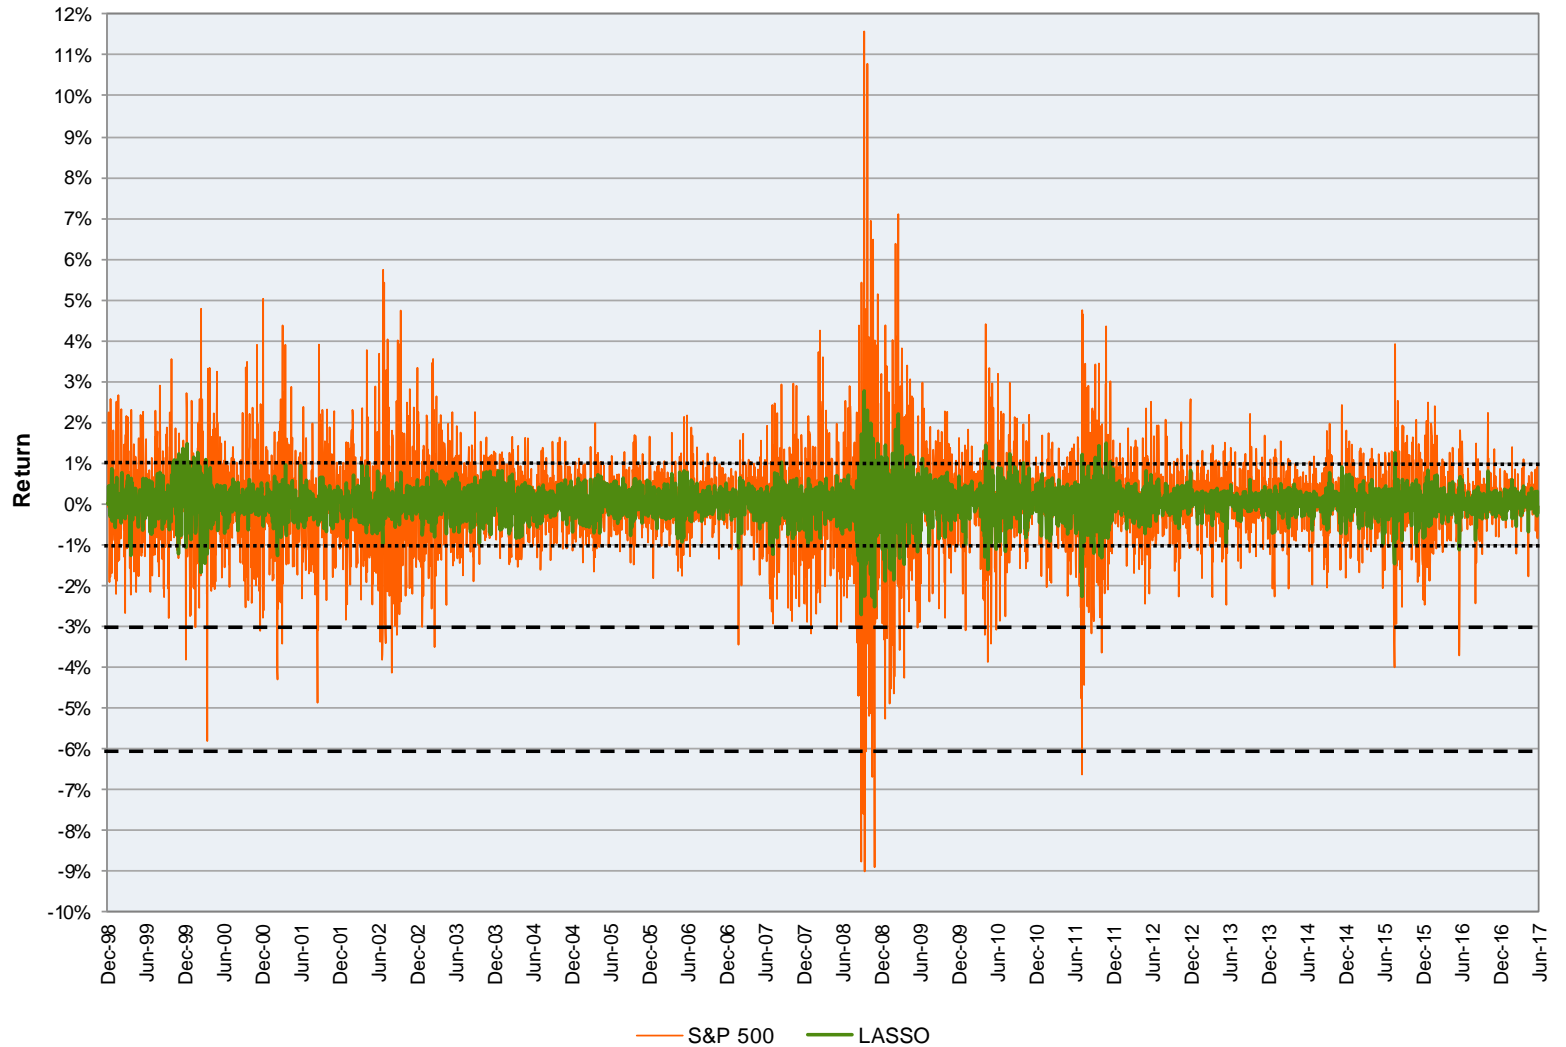

LASSO RISK PARAMETERS: DAILY VOLATILITY

Daily Returns: LASSO Composite (net) vs. S&P 500

Inception of LASSO from December 31, 1998 through June 30, 2017

LASSO HISTORY

A long record of...

**enhanced returns, lower risk, and reduced correlation...
via a liquid, “user friendly,” alternative investment.**

Performance

- Over eighteen year track record: 12/31/98 to 6/30/17
- Cumulative return since inception: 122.9% (net) versus 180.1% (S&P 500)
- Reduced volatility: gains achieved with less than 1/3 of the daily volatility of the S&P 500

Benefits: Structure

- Daily liquidity
- “User friendly” access to alternative strategies
- Diversification through an array of alternative strategies and instruments
- “One stop” package of alternatives to enhance the asset allocation process

Benefits: Risk/Return Profile

- Relatively stable returns (vs. equities)
- Potential downside protection and reduced volatility
- Reduced correlation to stocks and/or bonds
- Serve as an alternative or complement to conventional equity and fixed income

*See Explanatory Notes and Disclosures.
Past performance is no guarantee of future results.
There can be no assurance that any objectives can be achieved.*

LASSO STRUCTURE

**A multi-manager investment program...
of carefully selected alternative mutual funds...
that invest long and short, or use hedging or alternative strategies.**

Structure

- Multi-manager mutual fund program
- Managed portfolio of carefully selected mutual funds that invest long and short, or use hedging or alternative strategies
- Available through separate accounts or commingled pools

Additional Benefits

- Lower cost structure vs. hedge funds and funds-of-funds
- Regulated instruments
- No K-1s
- Provide access to unique mutual funds, some of which may be closed
- *For additional information, contact:*

LASSO EXPLANATORY NOTES AND DISCLOSURES

The preceding performance is a composite of all discretionary, fee-paying accounts managed by Lake Partners, Inc. (“LPI”) utilizing the LASSO Long and Short Strategic Opportunities strategy (“LASSO”). Performance is weighted by account size and time-weighted for each performance period, and reflects the reinvestment of dividends and other earnings. Performance is net of all fees and expenses, including: LPI portfolio management fees, fees and expenses of underlying funds, and brokerage, administrative, and custodial costs. (The composite includes separate accounts as well as all commingled vehicles utilizing the LASSO strategy).

Performance was affected by material market and economic conditions that were independent of and not controlled by LPI or the managers of the underlying funds and may be different in the future. Actual results and holdings of individual accounts will vary due to client cash flows, timing of implementation, different custodians, the availability of underlying funds, applicable regulation, and other factors. Small accounts may perform below the composite due to the greater impact of transaction costs.

**All securities investing involves the risk of loss.
Past performance is no guarantee of future results.**

There can be no assurance that the LASSO Long and Short Strategic Opportunities program can meet its stated objectives.

LASSO differs substantially from the market indices, which are included for comparison purposes only.

The S&P 500 is an unmanaged, capitalization-weighted index of the common stocks of 500 widely held US companies. It does not include fees or expenses. Direct investment in an index is not possible. (S&P 500 is a registered trademark of Standard & Poor’s Financial Services LLC, a subsidiary of The McGraw-Hill Companies, Inc.) LASSO differs substantially from the S&P 500, which is used for comparison purposes as a widely recognized measure of US stock market performance. While the returns of LASSO have exhibited positive (but varying) correlation to the index over time, the underlying funds in the program may invest in different stocks and in different proportions than in the index.

The Bloomberg Barclays US Aggregate Bond Index is an unmanaged index of fixed rate debt securities rated investment grade or higher by Moody’s, Standard & Poor’s, or Fitch rating services. All issues have at least one year to maturity and an outstanding par value of at least \$25 million to \$1 billion based on the type of security. The index does not include fees or expenses. Direct investment in an index is not possible. (Bloomberg is a trademark of Bloomberg Finance L.P. Barclays is a trademark of Barclays Capital PLC.) LASSO differs substantially from this index, which is used for comparison purposes as a widely recognized measure of U.S. bond market performance. Although the mutual fund allocations in the LASSO portfolio emphasize stocks and hedged equities, and bonds to a lesser degree, the historical volatility of LASSO (as measured by standard deviation, a measure of the variation of returns) is more comparable to the bond market index rather than the stock market index. LASSO may use underlying funds that invest in non-investment grade bonds, which may entail additional credit risk. LASSO may use underlying funds that invest in non-US and emerging market bonds, which may entail additional credit, sovereign, and currency risks.

LAGO EXPLANATORY NOTES AND DISCLOSURES

The HFRX Equity Hedge Index ("HFRXEH") is part of the HFRX series of hedge fund indices, published by Hedge Fund Research, Inc., which are designed to reflect the daily performance of a variety of hedge fund strategies. The indices include funds that meet the screening criteria of Hedge Fund Research, Inc., including a 24-month track record and \$50 million under management, and are open to new investments. The HFRXEH is designed to be both investable and to reflect the overall structure and composition of the equity long/short hedge fund universe. • LASSO differs substantially from the HFRXEH, which is used for comparison purposes as a daily-valued measure of hedge fund performance. LASSO is comprised of "alternative mutual funds," a limited universe of mutual funds that use short-selling, hedging, and other hedge-fund-like strategies. In contrast, the HFRXEH uses a sampling from the broad equity long/short hedge fund universe, which contains more funds and strategies than available through alternative mutual funds. In addition, hedge funds in the index may also use a greater degree of leverage and illiquid securities than permitted for mutual funds due to regulatory restrictions. Nevertheless, the performance of LASSO and the HFRXEH have exhibited positive (but varying) correlation over time, reflecting the prevalence of long-short equity strategies in the universe of alternative mutual funds. • The index is net of fees and expenses of the underlying managers, including incentive fees, a type of fee generally not charged by the mutual funds in LASSO due to regulatory restrictions. The index does not reflect a fund-of-funds management fee, which is reflected in LASSO performance. Direct investment in the index is not possible. Commingled vehicles based on the index are available to investors, subject to additional fees and expenses.

The Morningstar Multialternative Category (monthly data series) includes mutual funds (identified by Morningstar, Inc.) that offer investors exposure to several different alternative investment strategies. Funds in this category allocate a majority of their assets to alternative strategies and include both funds with static allocations to alternative strategies and funds tactically allocating among alternative strategies and asset classes. Gross short exposure is generally greater than -20%. • The performance of the Morningstar Multialternative Category is represented by the Morningstar Multialternative Category Average ("MMCA"). The MMCA is among the various averages published by Morningstar, Inc. to measure the performance of a group of funds that utilize a similar investment strategy. The MMCA is based on Morningstar's Enhanced Category Averages methodology, which reflects the average monthly returns for the Morningstar Multialternative Category, based on equally weighting each share class of each fund that existed in the category for the entirety of each historical month, with annual and trailing return calculated by geometrically linking these monthly numbers. The MMCA is net of fees and expenses of the underlying funds. • LASSO differs substantially from the MMCA, which is used for comparison purposes as a measure of alternative mutual fund performance. The LASSO portfolio may include mutual funds included or not included in the Morningstar Multialternative Category. The Morningstar Multialternative Category does not reflect a fund-of-funds management fee, which is reflected in LASSO performance. Direct investment in the MMCA is not possible.

Although the returns of LASSO have exhibited reduced or low correlations to the returns of the above indices, the indices utilized herein are widely recognized indices for the performance and risk characteristics of stocks, bonds, and alternative strategies, as well as for asset allocation and comparison purposes.
